

AIIMS

User Manual

One system, four portals, one set of rules underneath them. This book covers every screen you can reach, what each control does, and why the system answers the way it does when it refuses you.

PART ONE · GETTING IN

The same for everyone: choosing a portal, signing in, passwords, and the strip at the top of every screen.

PART THREE · FACULTY

Your classes, marking attendance, entering marks, and what happens when they are published.

PART FIVE · PARENT

Choosing a child, what that choice changes, and following their progress.

PART TWO · ADMINISTRATOR

Admissions, fees, examinations, the academic structure, the timetable, accounts and the audit trail.

PART FOUR · STUDENT

Your courses and timetable, your attendance and results, and your fee position.

READ FIRST

How to read a page, on page 4. It explains the colours and the numbered tags used throughout.

FRONT MATTER

About this manual

AIIMS runs one institute from admission to result: who is enrolled, who taught what, who attended, who paid, and what was published. This book covers all of it, in the order you actually meet it, and it explains the rules that decide what you are allowed to see and do.

Who this is for

Everybody who signs in. There are four portals and eight roles between them, and no single reader needs all five parts. Read Part One, which is the same for everyone, then the one part that belongs to your portal. The contents page on [page 3](#) shows which is which, and [page 5](#) is a one page summary of all four.

Roles are not portals. Five roles land in the administrator portal, not one. A Super Admin and an Admin see all of it; HR, an Accountant and Library Staff see a much smaller menu of the same portal. Where a chapter behaves differently for one of them, it says so. → [The menu shows only what the server will actually allow, p. 25](#)

What is in each part

Part One · Getting in

The landing page, the portal chooser, signing in, what a refusal means, forgotten passwords, changing your own password, and the header that every signed-in screen shares. Read this part whoever you are.

Part Two · Administrator

Twenty modules, from the dashboard through students, enrolment, attendance, fees, examinations, the academic structure, the timetable, staff accounts and the audit trail.

Part Three · Faculty

Your classes, marking attendance, entering marks and getting them verified, assignments, announcements and reports.

Part Four · Student

Your dashboard, registered courses, timetable, attendance, results and your fee position.

Part Five · Parent

Choosing which child you are looking at, and following that child's progress, attendance and fees.

Getting in

Part One comes before all four. Choosing a portal, signing in, passwords, and the strip along the top that every portal shares.

How this book was made

Every screenshot was captured from a running AIIMS installation with live data. Nothing is drawn, mocked up or retouched, so the counts and totals in the pictures are real figures from the day of capture and yours will differ. Every behaviour described here was read out of the code that produces it rather than remembered, and every rule carries the code that identifies it wherever it appears again. That system is explained on [page 4](#), before you meet it.

Every section is built the same way. What the screen is for, a marked-up picture of it, what to do in order, what to check, and one thing not to miss. See **page 4**.

FRONT MATTER

How to read this manual

This is a manual for somebody with the screen open and a job to finish. Every section is built the same way, so once you have read one you can skim the rest.

	The screen, and what you use it for	One or two sentences. If this is not the screen you want, you have lost nothing by reading them.
	A picture of it, marked up	Taken from a running installation, with the numbered notes underneath in the same order.
	What to do, in order	The steps for the job the screen exists for. Follow them from one to the next.
	What to check, and what refusals mean	Two columns: what you will see on the left, what to do about it on the right. Look here first when something will not save.
	The one thing not to miss	A single line against a coloured rule, at the foot of the page. There is never more than one.

The marks on a screenshot

Solid ring One control: something you press, type into or tick.	Dashed box A whole panel, or a run of columns in a table.	Numbered tag Matches the numbered note below the picture.	Arrow Joins a note to the exact thing it is describing.

Three shapes you will only meet in Parts Four and Five

The student and parent portals are read, not operated. There is no form to fill in and almost nothing is refused. Those two chapters answer a different question: not what to press, but what a number means and when it will appear. Three shapes carry that, and they appear nowhere else in the book.

83 % ATTENDANCE What it counts.	5 COURSES What it counts.	It is entered NOT YET YOURS The release rail. When a thing becomes yours to see. A filled stop is a point at which you can read it; a hollow one is not.	Why is my result not here? Because the semester has not been published.
The figure strip. The numbers on the screen, read out in the order they appear, each with what it is counted over.		The question list. A reader's own question in the portal colour, and the answer beside it. It replaces the table of refusals, because a family meets few.	

Colour ties a note to its mark, and nothing else. There is no code to learn. Where one section refers to another, it gives you the page: **page 8**, or a chip like **→ Five failed attempts lock the account, p. 8**. Every screenshot was taken from a running installation with live data, so the counts in them are real numbers from the day of capture and yours will differ.

FRONT MATTER

The four portals at a glance

AIIMS is one system behind four front doors. The door you are given depends on your role, and it is the only one your account opens. This page is the map of all four, so you can see where your chapter sits before you start reading it.

Administrator portal

Who holds an account here. Super Admin and Admin, who see all of it. HR, Accountant and Library Staff also land here, with a much shorter menu.

Where you land. `/dashboard`, or the first module you are allowed to open.

What it covers. Twenty modules: students and admissions, enrolment, attendance, fees, examinations, the academic structure, the timetable, teachers, announcements, staff accounts and the audit trail.

Part Two begins on **page 11**.

Faculty portal

Who holds an account here. Teachers. Accounts are created for you by an administrator; there is no sign-up.

Where you land. `/faculty/dashboard`.

What it covers. The classes you teach and nothing else: your rosters, marking attendance, entering and submitting marks for verification, assignments, announcements and reports.

Part Three begins on **page 30**.

Student portal

Who holds an account here. Students. The account is created when the admission is recorded.

Where you land. `/student/dashboard`.

What it covers. Your own record only: registered courses, your timetable, your attendance, published results and your fee position. Everything here is read-only apart from your own profile.

Part Four begins on **page 36**.

Parent portal

Who holds an account here. Parents and guardians, linked to one or more children by the admission office.

Where you land. `/parent/dashboard`.

What it covers. The same records a student sees, for one child at a time. A picker in the shell chooses which child, and every screen in the portal follows it.

Part Five begins on **page 42**.

One account, one door

A credential issued for one portal will not open another. Typing another portal's address into the browser does not get you in either: if you are already signed in, you are quietly returned to your own landing page. Learn this before your first attempt. A right password in the wrong portal is refused in exactly the same words as a wrong one. → **A role can only open its own portal, p. 6**

→ **One answer for every failed sign-in, p. 8**

If your menu is shorter than this book says it should be. HR, Accountant and Library Staff share the administrator portal but are shown only the modules their role can actually load, and are taken to the first of those instead of the dashboard. The menu is descriptive, not aspirational: it grants nothing, it only stops the portal advertising screens that would refuse you. → **The menu shows only what the server will actually allow, p. 25**

SECTION 1.1

Choosing your portal

The institute's address opens a public page with no password box on it. Pick your portal first. The sign-in form comes after that.

The landing page.
Choose your portal appears twice, in the bar and in the page. Both go to the same place. Nothing else here needs an account.

The chooser.
Student, Faculty, Parent, Admin. Each plate names who holds that credential, and its colour follows you through the whole portal.

TO SIGN IN

- 1 Press **Choose your portal**.
- 2 Press the plate that matches your role. Read the line at the foot of the plate if you are unsure: it names the holder.
- 3 Sign in on the screen that follows.
- 4 Bookmark that screen. Its address ends in your portal's name, so the bookmark skips both of these pages next time.

CHECK BEFORE YOU LEAVE

You are on the wrong plate Go back and choose again. An account issued for one portal will not open another, and trying costs you one of five attempts.

You have no password yet Ask the office. Accounts are created and passwords issued by an administrator. Nobody signs themselves up, except a new administrator.

Recover access Tells you who to contact. It does not send a reset email.
foot of the chooser

A role opens its own portal and no other. A signed-in student who types the administrator address is returned to their own dashboard rather than shown a refusal, so a bookmark to the wrong portal is harmless.

SECTION 1.2

Signing in

Every portal uses this one screen. Only the colour of the left pane and the wording on it change.

- 1

Which portal you are entering. The heading, the three lines beneath it and the colour of this pane all change with the portal. Read it before you type.
- 2

Email address. The full institute address you were issued.
- 3

Password. First time, use the one the office gave you. You will be asked to replace it straight away.
- 4

Show the password. Useful when a one-time password has been read to you over the telephone.
- 5

Forgot password. It tells you who to contact. It does not send a reset link.
- 6

Accounts are issued per portal. Shown always, not only after a failure. A note that appeared only on the wrong portal would confirm your password was right.

CHECK BEFORE YOU LEAVE

Create an administrator account	On the administrator portal only. Every other account is created for you by an administrator.
It will not accept a correct password	Check the pane on the left names your portal. That is the usual cause.
A refusal never says which half was wrong. Wrong address, wrong password, disabled account and unknown account all give the same answer. What to do about one is on page 8 .	

SECTION 1.3

When sign-in is refused

The same sentence appears whatever went wrong. From the second failure it counts down. At the fifth the account stops accepting attempts.

The countdown.
From the second failure: three more tries, then two, then one. Signing in successfully at any point clears it.

The lock.
At the fifth failure. Correcting the password will not reopen it, and there is no timer. Only an administrator can clear it.

Recover access.
Four tabs, one per portal, because the four are reset by different offices. It gives you a name to contact and asks for nothing.

WHAT TO DO ABOUT EACH

"Email or password is incorrect"	Check the left pane names your portal, then try again. The message is the same for a wrong password, an unknown address, a disabled account and the wrong portal.
"3 more tries before this account is locked"	Stop guessing. Use Recover access to find out who can reissue your password.
"This account is locked"	Ask an administrator to unlock it, from Staff accounts on <u>page 25</u> . Waiting will not help.
You have forgotten it but can still sign in	You do not need this screen. Change it from your own profile, <u>page 9</u> .

WHAT THE INSTITUTE DOES NOT DO

- 1 It sends no reset emails and issues no reset links. Your password is reset in person, so that your identity is checked first.
 - 2 It never says which half was wrong. A message reading *no such user* would confirm, for every address it did not say that about, that an account exists.
 - 3 It does not treat an unknown address as harmless. Those are counted too, for thirty minutes, and produce the same countdown.
- A lock tells three people.** Every administrator, and the account holder, who is the only person able to say *that was not me*. The lock is written to the audit trail as well.

SECTION 1.4

Your password

Two screens, and they are not interchangeable. One appears uninvited the first time you sign in. The other lives in your profile and is the one you go looking for.

Choose your password

Your account was set up with a password issued by the administration office, so somebody else has seen it. Pick your own to continue — you will not be asked again.

The password you were given

New password

At least 8 characters

At least one number

Upper and lower case

Confirm new password

Set password and continue

Sign out instead

FORCED, ON FIRST SIGN-IN

Your account was set up with a password somebody in the office chose, so somebody else has seen it. Until you replace it, every screen in every portal sends you back here.

It asks for the current password again although you typed it a moment ago. That is deliberate: a browser left signed in cannot be used to take the account over.

The three requirements tick as you type: at least eight characters, upper and lower case, at least one number. **Set password and continue** stays disabled until all three pass and the two new fields match.

Sign out instead is allowed and changes nothing. The request stays open, so your next sign-in lands back here.

Administrator	Settings, the Account category, the Password card. Not in the profile menu.
Faculty and Student	Profile, then Change Password .
Parent	Profile, then the change password dialog. Which child is selected makes no difference: the password is yours.

ROUTINE, FROM YOUR PROFILE

where to find it is in the table above

Password

This password has never been changed since it was issued

Current password

New password

Confirm new password

Change password

- 1

The line under the heading is read from your record. Before you have ever changed it, it says so. Afterwards it gives the date.
- 2

The same three fields and the same three requirements as the forced screen.
- 3

You stay where you are afterwards. Nothing signs you out and no other tab is disturbed.

WHEN EITHER SCREEN REFUSES YOU

The button stays grey
with all three fields filled

One requirement has not ticked, or the two new fields differ. The ticks sit under the new password field and turn as you type.

"Your current password is incorrect"

Type the password you were issued, not the one you are choosing. It is the password you signed in with a moment ago.

Every password change is recorded. For every role, not only administrators, and noting whether it was the first forced change or a later one. The password itself is never in the entry.

SECTION 1.5

The strip along the top

Five controls, in the same order in every portal. None of the four portal chapters describes them again.

- 1 Collapse the menu.** Narrows the sidebar to icons. Your choice is remembered.
- 2 Search.** One box across the whole portal, opening in place over whatever you were doing.
- 3 The assistant.** Answers questions about how AIMS works. Nothing is drawn at all for a role it does not serve, so yours may have no such button.
- 4 Notifications.** The count on the bell is unread notices, not new ones.
- 5 You.** Your profile, your settings, and the way out.

WORTH DOING ONCE

- 1 Collapse the menu if you work on a laptop. The choice is remembered on your account, not in this browser.
- 2 Check the address in the profile menu whenever you are on a shared machine, or have two portals open at once.
- 3 Sign out rather than closing the tab, if the machine is not yours.

**Search.**

Results group by what they are. The count beside a group is the true total of matches, not the rows shown. Which groups appear at all is decided by your role.

**The bell.**

Needs attention at the top is worked out afresh each time you open it, so an item can leave it without anyone reading anything. **Mark all read** clears the count and deletes nothing.

**You.**

Check the address here before you act on a shared machine, and whenever two tabs are open on two portals at once.

Each tab holds its own session. Two portals can be open side by side, and signing out of one leaves the other alone. Signing out empties everything that tab had fetched, so the back button cannot recover it.

SECTION 2.1

The dashboard

The first screen after you sign in. Use it to see what needs attention today. Every figure is counted from the live records as the page opens.

- 1 **The four figures.** The roll, the pass rate, fees collected and attendance. Each carries a second line saying what is wrong with it, and takes colour only when that line is asking for something.
- 2 **Fee collection.** Collected against everything billed this session. Only verified payments count.
- 3 **Academic standing.** The latest published result per student. The footnote names how many are missing, because a result still in draft is invisible here.
- 4 **Student roll.** Figure 1 again, split by standing. Records awaiting verification are counted apart.
- 5 **A card you pinned.** Anything saved from Ask the Data can be dropped onto this board and re-runs with the rest. → [2.15 Analytics, p. 28](#)
- 6 **Customise.** Add, move or resize panels. There is no save button. See [page 12](#).

TO ACT ON WHAT THE DASHBOARD IS TELLING YOU

- 1 Read the second line of each figure. That is where the work is.
- 2 Press the figure. It takes you to the screen that fixes it, already filtered.
- 3 To change a figure, change the records behind it.

SECTION 2.1, CONTINUED

Arranging the board, and reading the feed

The dashboard is yours to arrange, and the feed at the foot of it is a window onto the audit trail.

TO REARRANGE THE DASHBOARD

- 1

Press **Customise**. The panels become draggable.
- 2

Drag and resize. Add a panel from the list, or drop a card you saved from Ask the Data.
- 3

Stop. There is nothing to confirm: the arrangement is written to your account a beat after your last change.
- 4

Press **Reset layout** to put the original arrangement back.

TWO THINGS THAT SURPRISE PEOPLE

The board looks different on a tablet	A wide window and a narrow one are arranged and stored separately. Tidying up on a tablet cannot disturb your desk arrangement.
A panel will not delete	The four figures, the three panels and the feed can be moved and resized but not removed. The server refuses a layout without them.

Admin

- 1

Four tabs. Everything, administrative actions, payments and enrolments. They filter the forty records already fetched. They do not go back for more.
- 2

Audit trail. The same records without the forty-row window, and with filters. → [2.14 The audit trail, p. 27](#)

Read the row, not the module. Every row is written the same way: what happened, then who did it, then what it was done to, with the actor's role at the right. A sign-in lockout and a fee payment read alike, which is why one feed can carry both without a key.

SECTION 2.2

Students

The roll. Use this screen to find a student, correct a record, and admit a new one.

Three ways to add or take out
PDF exports whatever the filters currently show. **Bulk Import** takes a spreadsheet. **Add Student** admits one person, and is the subject of the next page.

Narrow before you scroll
Search by name, registration number or email. Then narrow by programme, batch and status. All four narrow the same query, so the count at the foot always describes what you are looking at.

Deleted records live here
Switch this to **Deleted records** to see students who have been removed, and to bring one back.

Every column sorts
The arrows in a heading sort the whole roll, not the ten rows on screen. **Actions** at the right opens the profile or edits the record.

Two thousand, ten at a time
The pager counts what the filters matched, not what is loaded. Type a page number and press **Go** to jump straight to it.

TO FIND ONE STUDENT

- 1 Type the registration number into the search box. It is the only field that is unique.
- 2 If nothing is found, set the record filter to **Deleted records** and search again.
- 3 Open the row from **Actions**.

Removing a student removes nothing. The record is marked deleted. Attendance, marks and fee history are kept, and the student can be restored from **Deleted records**. A fee history is not allowed to lose the person it belongs to.

SECTION 2.2, CONTINUED

Admitting a student

One form creates three things: the student record, the student's login and the guardian's login. The passwords are shown once.

Admit Student

✓ Draft saved on this device - just now

The registration number, the student's login and the guardian's login are created automatically. You will be shown the passwords once, straight after saving.

Admit Student
Type the student's details. There is no field for a registration number, an email or a password: the server writes all three.

Account created
Both logins, once. Copy or print them before you close this box. Nothing can show them again.

TO ADMIT A STUDENT

- 1 On **Students**, press **Add Student**.
- 2 Fill in the student block. First name, last name and CNIC or B-Form are required, and so are programme and batch.
- 3 Fill in the guardian block. Use the guardian's **real email address**: it becomes their login.
- 4 Press **Admit & Create Accounts**.
- 5 Press **Copy all** or **Print**. Hand the details to the family now.
- 6 Tick **I have saved or handed over these details**, then press **Close**. The box will not close any other way.

CHECK BEFORE YOU LEAVE

The guardian's email is already on file	The student is added to that existing guardian, and no new guardian password is issued. Their current password keeps working, and the dialog says so.
You closed the box without the passwords	They cannot be recovered. Issue a new password from the account's profile in User Management .
Nothing typed into the guardian block	The student is admitted without a guardian. Attach one later on <u>page 23</u> .

The password is shown once. The database keeps an encrypted form of it, so nobody can look it up afterwards, including you. Everyone must set their own password the first time they sign in.

SECTION 2.3

Enrolment

The same students, counted rather than listed. Use this screen to answer how many of what, at any level of the structure.

Enrolment
Every level counted in one request, so the levels always agree. Click any figure to see the students behind it.

PEOPLE — STUDENTS ON THE ROLL

2,005 Students
1,736 Active
1 Unplaced students

REGISTRATIONS — ONE ROW PER STUDENT PER SUBJECT

9,652 Active enrolments
350 Dropped
2,002 Students with courses
25 Subjects taught

9,652 active registrations across 2,002 students — about 4.8 subjects each. This is not a headcount. A further 350 dropped registrations are excluded from that figure (10,002 rows in total). Teaching currently covers 25 of the 200 subjects in the catalogue.

People, and registrations
Two different counts, kept apart so they cannot be confused. **People** is a headcount. **Registrations** is one row per student per subject.

Five levels, one count
Departments, programmes, batches, sections and semesters. All five are counted in one request, which is why two tabs never disagree.

Open shows the students
Every figure opens the roster it counted. Use it to check a number rather than trusting it.

Empty rows are shown on purpose
A department you created and never filled reads *No students enrolled yet* rather than disappearing from the list.

DEPARTMENT	WITHIN	STUDENTS	BY ACADEMIC STATUS	ROSTER
Computer Science	—	805	710 active 13 suspended 25 graduated 19 withdrawn	Open >
Business Administration	—	405	359 active 9 suspended 21 graduated 5 withdrawn	Open >
Software Engineering	—	398	325 active 12 suspended 27 graduated 15 withdrawn	Open >
Electrical Engineering	—	397	342 active 11 suspended 17 graduated 11 withdrawn	Open >
Humanities	—	0	No students enrolled yet	Open >

TO CHECK A COHORT

- 1 Choose the level: department, programme, batch, section or semester.
- 2 Filter by name or code to reach the row.
- 3 Read the bar on the row. It splits the cohort by academic standing.
- 4 Press **Open** to see the students behind the figure.

The roster decides the semester, not the column. Where a student's semester field is blank, it is read back from their enrolments. If a semester here disagrees with one you remember typing, believe this screen.

SECTION 2.4

Attendance

Seventy five per cent decides who may sit the examinations. Use this screen to find the students who are about to fall under it.

- 1 **The period.** Everything below is for the period chosen here. Holidays are excluded, and the rule counts present and late marks alike.
- 2 **Four figures, four filters.** Press one and the roster below follows it. **Not tracked** means no register entry at all, which is not the same as absent.
- 3 **Standing against the requirement.** Watch the 75 to 90 per cent band. Those students are eligible today and one bad fortnight from not being.
- 4 **Monthly rate.** The dashed line is 75 per cent. A hollow bar has too few sessions to read as a rate. Select a month to filter the screen to it.

TO FIND THE STUDENTS AT RISK

- 1 Set the period to the current term.
- 2 Press **Below 75%**. The roster narrows to those students.
- 3 Press **Not tracked** as well. Those students have no register at all, and no teacher has noticed.
- 4 Export the roster, and pass it to the departments before the examination timetable is fixed.

The same line is used everywhere. A student, a teacher and a guardian looking at one subject all see the same verdict. Marking a student absent notifies the student and every linked guardian at once (→ **Being marked absent notifies the family, and the wording changes at 75 %, p. 32**).

SECTION 2.5

Academic structure

Departments, programmes, batches, sections, rooms, semesters and subjects.
Everything else in the portal hangs off these seven lists.

Academic Structure

5 departments · 6 programmes · 6 batches · 9 sections · 31 rooms · 40 semesters · 200 subjects

STUDENTS

2,005

1736 active

TEACHERS

24

on the faculty

Filter departments by any column shown in the table below...

+ Add department

DEPARTMENT	HEAD	IN USE BY			ACTIONS	
Business Administration	Fatima Siddiqui	2 programmes	10 employees	405 students	Edit	Delete
Computer Science	Haris Bhatti	2 programmes	10 employees	805 students	Edit	Delete
Electrical Engineering	Tariq Raza	1 programme	5 employees	397 students	Edit	Delete
Humanities	No head assigned	0 programmes	0 employees	0 students	Edit	Delete
Software Engineering	Laiba Abbasi	1 programme	10 employees	398 students	Edit	Delete

One figure is a job

Students, teachers and sections are facts. Unplaced students is work: those students have no section, so no timetable and no register.

Build left to right

A programme needs a department, a batch needs a programme, a section needs a batch. Work in that order and nothing waits for something that does not exist.

Add on the tab you are on

The button follows the list. On Departments it adds a department, on Rooms a room.

Read In use by first

It counts what points at the row right now. A row reading 0 programmes, 0 employees, 0 students is the only kind that will delete.

ADMINISTRATOR

TO REMOVE SOMETHING FROM THE STRUCTURE

1 Find the row and read its **In use by** column.

2 Move whatever is counted there onto another row first. Reassign the students, then the batches, then the semesters.

3 Delete the row once the column reads zero throughout.

CHECK BEFORE YOU LEAVE

"This programme is still in use: 408 students, 2 batches, 8 semesters"

The refusal names everything blocking it at once, so you can clear them in one pass. Deleted students still count.

Unplaced students above zero

Put them in a section. Until you do they have no timetable, no register and no attendance record.

Here, delete means delete. Once nothing points at a row it is removed for good. Accounts are the exception: a person stays nameable by the audit entries, results and payments they left behind.

2.5 Academic structure

17

SECTION 2.6

Fees

Two separate questions on one screen: what has actually arrived, and what a semester is supposed to cost.

1 What has arrived. Total collection counts verified money only, never money declared. Collection rate is that money against what was billed.

2 Two different red figures. Pending and overdue together are what is owed. **Overdue students** counts only those past a due date. A bill inside its term is owed but not late.

3 Monthly collection plots verified payments. A month with no bar had no verified payment, which is not the same as a month with no activity.

4 The published schedule is a price list, not billing. Tuition, laboratory, examination and library are separate rows, and a voucher bills their sum.

TO CHANGE WHAT A SEMESTER COSTS

- 1 Edit the row in **Published Fee Schedule**.
- 2 Raise the vouchers for that semester afterwards. Vouchers already raised keep the old amount.
- 3 Check the header. It reads **2,005 students, 2,000 billed**, so five are on the roll with no voucher against them at all.

The amount is taken from the schedule unless someone overrides it. A semester's fee is spread over several schedule rows and the voucher bills their sum, so a voucher for zero is refused.

SECTION 2.6, CONTINUED

Verifying a payment

The roster is what the institute holds. The queue below it is what somebody has claimed. Nothing crosses from one to the other on its own.

1

2

3

4

Student Fee Roster

Showing 10 of 2,005 students

- 1

2

3

4
- Filters and search.** Batch, programme and status, plus a name or registration number. They combine, and the chips below follow them.

Billed, paid, balance due. A settled row prints *Settled* rather than Rs. 0, so a cleared bill and an unraised one do not look alike.

Four chips that do not sum. Overdue is a subset of what is still owed, not a fifth category.

Due date and status. A student who owes nothing shows *Nothing due*, not an empty cell that would read as missing data.

Payment Approvals

Payments parents and students have declared. Nothing here has moved a balance yet — verifying is what applies it.

Awaiting decision

Verified

Rejected

TO VERIFY A DECLARED PAYMENT

- 1

2

3

4
- Open **Payment Approvals** and stay on **Awaiting decision**.

Check the claim against the bank record.

Press **Verify**. This issues the receipt number, recomputes the voucher and records who decided, in one step.

Press **Reject** if it does not match. The row is kept and stamped with the time.

A declared payment moves no money. It sits as **Pending** until an officer verifies it. A voucher with any payment against it can be cancelled but never deleted, and money beyond what a voucher bills is carried forward against the oldest outstanding voucher first.

SECTION 2.7

Examinations

Read the line under each figure before the figure. It names how many students that figure is over, and it is never the whole roll.

- 1 Average score and pass rate.** Each carries its own denominator: 2,000 students with graded examinations, and 1,373 of 2,000 with a result. Neither is over the 2,005 on the roll.

3 Grade distribution. Bar height is a count, the label on top is a share. Students not yet assessed are left out rather than drawn as an empty grade.
- 2 Distinction and failure.** The two ends of one CGPA scale, cut at 80 per cent and at 2.5. Failure is given as a count and a share.

4 Programme summary. Average CGPA and pass rate side by side, so a programme with a low average on a healthy pass rate can be told from one failing outright.

TO PUBLISH A SEMESTER'S RESULTS

- 1 Clear the drafts. The screen names each semester and how many drafts it still holds.
- 2 Verify the marks that are ready.
- 3 Publish the semester. One step computes the weighted GPA, carries the CGPA across published semesters, releases every verified mark and notifies the families.
- 4 To correct a published semester, publish it again. The second run replaces the first rather than adding to it.

Families see published marks and nothing else. Teachers and administrators see drafts, verified marks and published marks. That is why a figure here can differ from what a teacher sees in their own gradebook (→ A mark is invisible to the family until the semester is published, p. 33).

SECTION 2.8

The timetable

Pick a class on the left and place it in the week on the right. The grid has already worked out which cells are legal, and labels the rest with the reason.

- 1

How far from finished. Four states, each a filter: no teacher, not placed, partly placed, complete. A term is done when the first three are empty.
- 2

The queue. Ordered by how much attention a class needs, so classes with no teacher sit at the top. Each card shows its section, its teacher and its progress.
- 3

Why a class is hard to place. Class size, periods placed, periods open, and how many rooms fit. The last figure usually explains the rest.
- 4

The week. A cell offers the rooms that would work, or is shut with its reason: meets here, free, no room fits, section or teacher busy.

TO PLACE A CLASS

- 1 Choose the class from the queue.
- 2 Read the line above the grid. If it says few rooms fit, fix that before trying cells at random.
- 3 Press a free cell and choose a room from the ones it offers.
- 4 Repeat until the card reads its full number of periods.

WHEN A CELL WILL NOT TAKE THE CLASS

Section or teacher busy	The whole period is shut. Move the other class, or give this one a different teacher.
No room fits	Every room is taken, the wrong type, or too small for the class. Reduce the section or book a larger room.
The period will not clear	A register already exists against it. Who was in the room outlives the decision that put them there, so the period stays.

There are four periods a day. 08:30, 10:00, 11:30 and 13:30, ninety minutes each. The half hour at 13:00 cannot be booked.

SECTION 2.9

Teachers, and what they may teach

Two screens, in this order. The directory is who is on the staff. The registry is what each of them may be given. Qualify a teacher before you timetable them.

The screenshot shows the 'Faculty Directory' page with a search bar and an 'Add Teacher' button. Below the header, there are three teacher profiles:

- 1** Adnan Farooq (AF), Associate Professor, Computer Science, EMP-1130. Weekly Load: 4.5 h (3 sessions).
- 2** Ayesha Raza (AR), Assistant Professor, Computer Science, EMP-1011. Weekly Load: 6 h (4 sessions).
- Bisma Ahmed (BA), Assistant Professor, Business Administration, EMP-1015. Weekly Load: 4.5 h (3 sessions).

- 1 One row per teacher.** Employment status, employee number, designation and department, then the two counts that say how busy they are.
- 2 Weekly load** is computed from the timetable, not typed. A teacher with subjects but no load has been qualified and not yet scheduled.

The screenshot shows the 'SEMESTER 3' and 'SEMESTER 4' subject registries. Each semester lists subjects with checkboxes and a 'CH' count.

Every subject, ticked or not
The whole catalogue is listed by programme and semester. What a teacher *cannot* be given is as visible as what they can. Tick, then **Save**.

A padlock means it is in use
A subject the teacher currently holds a class in cannot be unticked. The control is locked rather than offered and refused.

TO HAND A SUBJECT TO ANOTHER TEACHER

- 1 Qualify the new teacher for the subject in the registry.
- 2 Change the teacher on the class. This moves them into every period the class occupies, so the change is refused outright if they are busy in any one of them.
- 3 Untick the subject for the old teacher. The padlock will have cleared.

Almost nothing else here is refused. A qualification is an administrative judgement, and a department may reasonably give a subject to someone outside it. Only a live class blocks the change, and the refusal names the classes so you know what to reassign.

SECTION 2.10

Parents and guardians

Use this screen to register a guardian, attach one to a student, and find the links that are wrong.

- 1 **Four counts.** The last three add up to the first. When they do not, a link points at a student who is no longer there.

3 **No ward linked.** A warning, not a state to leave alone. That guardian can sign in, and every screen behind it is empty.
- 2 **One search box.** It matches parent name, child name, registration number, email, telephone and occupation. Search by the child.

4 **The children badge.** The fastest check on this screen. A family with two children showing one child has a sibling on another account.

TO LINK A GUARDIAN TO A STUDENT

- 1 Search for the guardian by the child's name.
- 2 Point at the guardian's row. Three buttons appear at its right: **Edit**, **Link child** and **Delete**.
- 3 Press **Link child**, choose the student, and save.
- 4 Read the badge on the row. It must now show the number of children that guardian actually has.

CHECK BEFORE YOU LEAVE

"No ward linked" on a row	Link a child. Until you do, that guardian signs in to empty screens.
Fewer children than the family has	A sibling is attached to a second guardian account. Link the sibling here, then delete the duplicate.
Add parent top right of the screen	Registers a guardian only. It does not admit a student. Admit the student first, on page 13 .

Unlinking does not delete the guardian. It removes the link and nothing else. The account survives with no ward, which is the state the first row on this screen is in.

SECTION 2.11

Announcements, and notifications

An announcement is written by a person and addressed to a group. A notification is written by an event and addressed to one account. Use the right one.

- 1

New Announcement writes one notice. Choose its audience on the form.
- 2

Four filters and a date range. Free text over titles and bodies, the audience, the author, and the sort. The count in the heading is the total published, not the number showing.
- 3

One card per notice, carrying its audience badge. **Edit** and **Remove** are on every card. There is no read state, so removing one removes it for everybody.

TO REACH ONE SECTION RATHER THAN EVERYONE

- 1 Press **New Announcement** and write the notice.
- 2 Add an audience rule instead of picking a single role. Set only the columns that matter, for example batch 2 and section CS-4A.
- 3 Add a second rule for a second group. Rules are combined with *or*, so one notice can reach both.
- 4 Check the audience badge on the card afterwards.

	ANNOUNCEMENT	NOTIFICATION
Written by	a person	an event
Addressed to	a role, or an audience rule	one account
Read state	none	per recipient
Found on	the notice board	the notification centre

A reader's section is read from their own record. A notice aimed at one batch cannot be opened by claiming to be in it, or pulled up by guessing its address. Administrators see all of them.

SECTION 2.12

Staff accounts

Everyone who signs in on the administrative side. Five roles land in this portal: Super Admin, Admin, HR, Accounts and Library.

- 1

One search, two filters. The role, and whether the login is enabled.
- 2

Add staff account creates the login and shows its password once. Only a Super Admin can create or amend another Super Admin.
- 3

The actions on a row. Edit, reissue credentials, disable, delete. On your own row the last two are greyed out rather than hidden.

TO REISSUE SOMEBODY'S PASSWORD

- 1 Find their row and press the key.
- 2 Copy the new password. It is shown once, and their previous password stops working immediately.
- 3 Hand it over. They are asked to change it the first time they sign in, and they are told the password was reissued.

CHECK BEFORE YOU LEAVE

Delete and disable greyed out on your own row	You cannot remove your own access. It is one click that locks you out of the only screen that could undo it. Ask another administrator.
A staff member sees a short sidebar	Correct. Accounts, HR and Library land here with a reduced menu and are sent to the first module they can open. The menu grants nothing on its own.
A deleted account still signs in	Report it. Deleting sets both the deleted and the inactive flag, because an account that is deleted and can still sign in is only hidden.

The institute is never left with no Super Admin. The last active one cannot be deleted or disabled, by anybody, including themselves.

SECTION 2.13

Every login the institute has

Staff, teachers, students and families in one list. The list answers who has an account. A row opens the panel where you act on one.

1

ACCOUNT HEALTH

counted over all 4,052 live logins

1,014 Never signed in

0 Locked out

315 Failed attempts

4 Must change password

0 Deactivated

14 No person record

2

Search by email address...

All roles (4,052) 4,052 accounts

Account	Role	Last sign-in	Failed	Flags	Created
AD Administrator One admin1@aims.edu.pk	Admin	5 days ago	—	Healthy	3 yrs ago
AT Administrator Two admin2@aims.edu.pk	Admin	today	—	Must change password	3 yrs ago
AT Administrator Three admin3@aims.edu.pk	Admin	yesterday	—	Healthy	3 yrs ago

3

- 1

Account health. Six counts over every live login, and each one is a filter. **Locked out** and **No person record** are the two that need somebody today.
- 2

Search is by email address only, because that is what an account is. To find somebody by name, use Students, Teachers or Staff accounts.
- 3

Flags says what is wrong with a login before you open it: healthy, must change password, never used, locked.

WHAT A ROW OPENS

the panel slides in from the right

ROLE

Admin

ACCESS

Deactivate this login

Issue a new password

Deactivating blocks sign-in without deleting anything — the person record and their academic history stay intact. A reissued password is shown once and cannot be read back afterwards. An account locks itself after five failed sign-ins and stays locked until you unlock it here; unlocking also clears the failed-attempt count.

- 4

The sign-in record. Seven lines the table has no room for. Amber wants attention: never used, failed attempts standing, a password never changed.
- 5

Role is a control, not a label. Changing it changes what the account may reach, at once. Super Admin is absent unless you are one.
- 6

Access. Deactivate, and issue a new password. **Unlock this account** appears above them, on a locked account only.

TO LET SOMEBODY BACK IN

- 1

Press **Locked out** in account health. The list is now the locked accounts and nothing else.
- 2

Open their row and press **Unlock this account**. The failed count returns to zero with it.
- 3

If they have also forgotten the password, press **Issue a new password** and copy it before you close the panel.
- 4

Tell them it was reissued. They are asked to change it the first time they sign in.

CHECK BEFORE YOU LEAVE

There is no unlock button on the account you were called about

The account is not locked. Read **Locked out** in the sign-in record. Only five failed sign-ins lock one.

The flag reads no person record

A login with nothing behind it. Deactivate it until somebody can say who it belongs to.

A password can be replaced, never read back. The database holds a hash, so there is no screen anywhere that shows an existing password. Issuing a new one is the only way to help somebody in.

SECTION 2.14

The audit trail

What was done, by whom, and to what. Use it to answer who changed a record and when. It does not record what anyone looked at.

- 1

The subtitle is the guarantee. Entries are written by the services that perform them, and cannot be edited or removed from here. There is no control on this screen that changes a row.
- 2

Four filters. Free text over people, students, examinations, emails and record references, then the module, the action and a date range.
- 3

Rows are sentences, not codes. Each carries the actor, their role and the address the act came from.
- 4

Grouped by day. Under *Today* and *Yesterday*, rather than repeating the date on every line.

TO FIND OUT WHO CHANGED A RECORD

- 1

Type the registration number, the email address or the record reference into the search box.
- 2

Narrow by module if the record is busy.
- 3

Set the date range to the day it was noticed, then widen it backwards.
- 4

Open the row to see the before and after values.

WHAT IS NOT HERE, AND WHY

Somebody opened a page	Not recorded. A log holding every read buries the twelve rows that matter under a hundred thousand that do not.
A password, old or new	Stripped before the row is written. An audit trail holding credentials is a second place to steal them from.
An act you know happened	A failed audit write never fails the act it describes. Losing the record is better than refusing the mark.

Acts are recorded. Creating an account, issuing a password, removing a student, raising a voucher, deciding a payment, marking a register, amending a mark, locking and unlocking.

SECTION 2.15

Insights, and asking the data

Two screens. The first computes the figures for you. The second turns a plain question into a query and shows you the rows.

1 At risk is the one figure here that is a judgement rather than a fact. It is the institute's own combination of attendance, marks and fees. Press **Customise** to see and change what goes into it.

2 Quick statistics repeat figures that live elsewhere, on purpose. They agree with Examinations, Attendance and Fees because they are the same query, not a copy.

ASK THE DATA

Type a question in plain English. It becomes a database query, and the rows come back as a table or a chart. Nothing is summarised or rewritten on the way back. The model plans the query; the rows never travel through it. A figure here is exactly as trustworthy as the same figure on the screen it came from. Start from one of the example questions and edit it. That is the fastest way to learn what the screen understands.

WHO GETS WHICH ASSISTANT

Administrators and teachers	Both. The chat assistant, and Ask the Data.
Students	The chat assistant only. Every figure a student is entitled to already has a screen of its own.
Parents	Neither, at present. A parent's scope is their wards, which needs its own resolver, and the button renders nothing rather than offering something that will fail.

Questions are limited per account. Eight a minute, sixty an hour, two hundred a day, and three times each of those for an administrator. Over the limit the answer names the wait, and refused attempts count towards it.

SECTION 2.16

Reports, settings and notifications

Three short screens. Each carries one thing worth knowing before you use it.

Reports.
Six reports, each downloading as a PDF. The figures on the card are the figures the report will contain, computed now.

Settings.
Theme, row density and text size are saved to your account, not to the browser, and applied across every portal.

TO TAKE A REPORT AWAY

- 1 Read the figures on the card. They are what the PDF will contain, so a card that reads zero produces an empty report.
- 2 Press **Generate**. The file downloads; nothing is stored on the server and nothing is emailed.
- 3 Check the date range printed on the first page before you pass it on. It is the range the card was counting.

NOTIFICATIONS

one row per event, with a link back to it

- 1 **Filter by type** to find one: account, fee, attendance, result, announcement.
- 2 **Mark all read** clears the read state and nothing else. The rows stay.
- 3 **A row names the event that wrote it** and links to the screen it happened on.

CHECK BEFORE YOU LEAVE

- | | |
|---|---|
| A report is empty
and the screen showed figures | The card counts the current term. A report for an earlier one is generated from Examinations, not here. |
| Your theme followed you to another machine | Expected. Appearance is stored on your account, not in the browser. |

You are never notified about your own act. Two exceptions, both about your own account: your password was changed, and your account was locked. One of those arriving when you did nothing is how a takeover gets noticed.

SECTION 3.1

The faculty dashboard

Everything here is your own classes and cannot be widened. The four figures are the four questions a teacher opens the portal to ask.

- 1 **Four counts, all of them yours.** Classes, the students across them, today's lectures, and the attendance rate over the classes you teach.
- 2 **Class performance** puts attendance and marks side by side. A class where the two disagree is the one worth looking at.
- 3 **Grade distribution** covers students graded in your subjects. It moves when you release marks and not before.
- 4 **Today's schedule** names the weekday it is showing, and says plainly when there is nothing. An empty panel and an unloaded one look different.

CHECK BEFORE YOU LEAVE

A class you teach is missing	It has not been assigned to you. Ask the office. A class assigned but not yet timetabled does appear, with no periods against it.
A student you teach is not here	They are not enrolled in the section you teach that subject to. Enrolment is what puts them in your scope, not the class list.
An assignment was withdrawn and still shows	Wait a minute and reload. Scope is looked up on every request, so the change lands within about a minute.

You see a student through the timetable. The timetable puts you in front of a section for a subject, and the student is enrolled in it. Both must be true, and every count on this board is that scope, counted.

SECTION 3.2

My classes, and my students

The same people, twice. As the classes you have been given, and as the students in them. Start from a class when you are about to teach.

Semester and section

Two filters and no search box. With four classes there is nothing to search. The line above counts what they add up to.

Open Class is the way in

It carries the subject and the section with it, so the register, the gradebook and the report you land on are already scoped to this card. Reaching them from the sidebar means choosing the class again.

MY STUDENTS

Attendance and marks here are for **your own classes**. A student you teach one subject to shows you that subject's figures, not their whole record.

Below 75% is the figure to act on, and it is a filter. Six more filters narrow the roll, and all three export buttons export what is showing.

TO CHASE THE STUDENTS AT RISK IN ONE CLASS

- 1 Open **My Students** and set the section filter to that class.
- 2 Press **Below 75%**.
- 3 Press **Export CSV**. It exports the filtered list, not the whole roll.

Nothing you type widens the scope. The filters run inside it, not around it. The rows a search returns are decided on the server, per role, never by the search box (→ **Search returns only what your role may reach, p. 10**).

SECTION 3.3

Marking the register

A register belongs to a period, not to a day. Choose the class, then the date, then mark the roll.

Attendance

CS-402 — Operating Systems · Section CS-2B

113

Not marked

0%

Attendance Rate

Export Excel

Export PDF

4

Export CSV

- 1

Class, then date, in that order. The class names its subject and its section together, because one subject taught to two sections keeps two registers.
- 2

The banner is the refusal, shown early. It names the class and the weekday, so the fix is obvious without opening the timetable.
- 3

Not marked is its own count, beside present, absent, late and leave. A student nobody has marked is not absent.
- 4

Export takes this sitting, in three formats. The term figure is on **My Classes**, over its own record count.

TO MARK A REGISTER

- 1

Choose the class, then the date.
- 2

If the class meets more than once that day, choose the period. Saving without one is refused.
- 3

Mark the roll. Leave nobody on **Not marked**.
- 4

Save. Saving the same period on the same date again updates the rows rather than failing.

WHEN YOU CANNOT MARK IT

"CS-402 does not meet on Wednesday"	Pick a date the class is timetabled for. There is no register to write against a day it does not meet.
It asks which period	The class meets twice that day and the two registers are separate. Choosing the wrong one marks the wrong lecture.

Marking a student absent tells the family. The student and every linked guardian are notified. If the absence took them below 75 per cent it is the same message, worded as a warning.

SECTION 3.4

Marks

A mark passes through four states on its way to a student. Typing the number is the first of them, and the least consequential.

The screenshot shows the 'Marks' interface. At the top, there's a title 'Marks' and a subtitle 'DS-405 · Assignment: Assignment 1 · out of 25'. To the right are buttons for '+ New Exam', 'Export Excel', 'Export PDF', and 'Export CSV'. Below this, there are two dropdown menus: 'Exam' (selected: 'DS-405 · Assignment: Assignment 1 (Aug 10, 2026)') and 'Section' (selected: 'Section DS-4A · 395 students'). A search bar labeled 'Search' with the placeholder 'Student or roll number' is present, along with a 'Reset Filters' button. The main area displays statistics: 'Students: 395', 'Entered: 9', 'Pending: 386', 'Average: 12', and 'Highest: 12'. Below these are 'Lowest: 12' and 'Pass Rate: 0%'. At the bottom, there are four state boxes: 'Draft: 0' (Saved on the server. Not visible to students.), 'Submitted: 7' (Sent for approval. Awaiting an administrator.), 'Released: 2' (Published by an administrator. Students can see these.), and 'Unsaved: 0' (Typed here, not yet sent to the server.).

- 1 **The exam, then the section.** The exam names its kind, its date and its total, so a mark cannot be entered against the wrong scale by accident.
- 2 **Entered and pending** sum to the class. Everything else on the screen is computed over the entered ones only.
- 3 **Average, highest and lowest agreeing exactly** is the signal that a class has barely been marked yet. Read them against *entered*, not against the class.
- 4 **The four states.** *Unsaved* is in this browser. *Draft* is on the server. *Submitted* is waiting on an administrator. *Released* is the only one a family can see.

TO MARK AN ASSESSMENT

- 1 Choose the exam, then the section.
- 2 Type the marks. They are unsaved until you save, and unsaved means this browser only.
- 3 **Save draft** as you go. A draft is on the server and is invisible to students and guardians.
- 4 **Submit** when the class is complete. It then waits on an administrator to verify and publish.
- 5 Leave nothing in **Draft**. A semester will not publish while a draft is in it, and the administrator's screen will name your class.

Families see released marks and nothing else. An assessment nobody has marked is reported to the student as awaiting a result, not as a zero and not as an absence.

SECTION 3.5

Assignments, and the week

Two screens. What you have set, and where you are meant to be.

Assignments

Student submits → teacher reviews → marks only → grade generated automatically

Create Assignment

Three ways to cut the same work
By assignment, as figures, or by student. The line above them states the workflow: the student submits, you review, you enter marks only, and the grade is worked out for you. **You never type a grade.**

One row, two ways in
Each row carries submitted, graded and average marks. **View** opens what was handed in. **Enter Marks** goes straight to the gradebook for that assignment.

Thursday Aug 27	—	—	—	BREAK

THE TIMETABLE

Next class sits above everything else: subject, section, day, time and room in one line. The date names the timezone it is reckoning in, so a timetable read while travelling is still right.

The grid marks the **break** as its own hatched column, so an empty period and an unbookable one do not look alike. An empty cell prints a dash.

CHECK BEFORE YOU LEAVE

- A period is missing from your week

The class has not been placed yet. It still appears in **My Classes**, with no periods against it.
- A period you have taught is still on the grid

Correct. Once a register exists against a period the administrator cannot remove it. The record of who was in the room outlives the decision that put them there.
- Four periods a day. 08:30, 10:00, 11:30 and 13:30. The half hour at 13:00 is not bookable by anybody (→ Every lecture sits in one of four fixed periods, p. 21).

SECTION 3.6

Reports, the feed, and asking the data

The last three screens on the sidebar. Each is scoped to your own classes, and each says so on its own face.

Reports
Attendance · Marks · Grades · Assignments · Performance · Class Summary — generated from your own classes and exportable to Excel, PDF or CSV

2 [Excel] [PDF] [CSV]

1 [Attendance] [Marks] [Grades] [Assignments & Quizzes] [Student Performance] [Class Summary]

3 Search: Any field in this report Class: All My Classes Date From: mm/dd/yyyy

- 1 Six reports.** Choosing a tab changes the report. All six are generated from your own classes.
- 2 Three formats.** Excel, PDF or CSV. The buttons stay where they are whichever report you pick.
- 3 Search runs inside the report,** not across the institute. The class filter offers *All My Classes*, which is as wide as it goes.

Answered about your classes only

Ask the Data

Ask in plain language. The question becomes a database query, and the rows come back as a table or a chart — never summarised, never rewritten by a language model.

e.g. average attendance per subject for my classes [Ask →]

Average attendance per subject for my classes Which of my subjects has the lowest average marks?

My students below 75% attendance Marks distribution for my sections as a chart How many students do I teach?

ASK THE DATA

The same engine as the administrator's, wearing a different badge: **answered about your classes only**. The example questions are written in the first person because that is the only kind it will answer.

Pin a question to keep it. Pinned questions re-run each time the screen loads, so a card is never a stale answer.

Your notification centre shows your own notification rows and the announcements addressed to you, under one unread count.

Your question is narrowed before it runs. The plan is cut down to the sections the timetable puts you in front of, and the rows never travel back through the model. A figure here is the same figure the screen it came from would show you.

→ A teacher's query is rewritten against their own roster before it runs, p. 30

SECTION 4.1

Your dashboard

The screen you land on. Five figures, then today's classes. Everything here is read from your own record, so there is nothing to set and nothing to save.

- 1
- Your registration number, programme and section. Quote the registration number when you write to the office.
- 2
- Five figures, all computed. None of them was typed by anyone. They are read out below.
- 3
- Today's classes, in the order they run, with the room and the teacher. The whole week is on your timetable.

3.90 SEMESTER GPA This semester only, once it has been published.	3.83 CGPA Every published semester, weighted by credit hours.	83 % ATTENDANCE Across every subject. The exam line is 75 per cent.	Rs 213.1K OUTSTANDING FEE What is still owed. Money awaiting verification is not deducted.	5 ENROLLED COURSES This semester, from your enrolments.
--	--	--	---	--

QUESTIONS THIS SCREEN ANSWERS

Why does my GPA say nothing yet?

The semester has not been published. Marks are entered over weeks and released in one act, so nothing appears until every mark in the semester is in.

→ A mark is invisible to the family until the semester is published, p. 33

Today's schedule is empty and I have classes.

The panel shows today only, and it is empty on a day none of your courses meet. The whole week is on **Timetable**.

Which semester am I in?

Nobody sets it. It is worked out from the courses you are enrolled on, so it changes when your enrolment does.

→ A student's semester is resolved from their enrolments, p. 15

Every screen in this portal is your own record and nobody else's. There is no way to reach another student from here, and no search that would return one.

SECTION 4.2

Your courses, and where to be

Two screens that answer the same question from opposite ends. My Courses is what you are registered for. The timetable is when each of them meets.

My Courses.
One card per course you are registered for this semester, with its code, its teacher and your standing in it.

Timetable.
Your week, drawn against the four periods every lecture in the institute sits in. The half hour at one o'clock cannot be booked.

5 CLASSES A WEEK Periods actually placed on the grid for you.	5 SUBJECTS Courses you are registered for this semester.	0 LECTURES Periods in a lecture room rather than a laboratory.	5 LABS Periods in a laboratory. Rooms are named on the grid.
---	--	--	--

■ TO FIND OUT WHERE YOUR NEXT CLASS IS

- 1 Open **Timetable**. The line at the top names your next class, its room and its time, without you reading the grid.
- 2 For a room you cannot find, open the course from **My Courses** and press **View details**. The teacher's name is there.
- 3 Switch the grid between **Week** and **Day** with the control at the top right. Day is the more useful view on a phone.

■ QUESTIONS THESE SCREENS ANSWER

A course is on my list but has no classes in the week.	It has a teacher but has not been placed on the grid yet. It is a real registration and it will appear once the office places it. → A class appears to its teacher before it is timetabled, p. 30
Two of my courses clash.	They cannot. The grid refuses a period your section is already in, so a clash you can see is a room change nobody recorded. Tell the office.
Neither screen can be edited.	Your registration is made by the office, and the week is built by whoever runs the timetable. What you see here is the record, not a request.

SECTION 4.3

Attendance, and the line you have to stay above

Your own attendance, by subject and by month. One number on this screen decides whether you may sit the exam, so read it per subject and not overall.

SECTION 4.4

Results, and when they appear

Marks reach this screen in one act, at the end of a semester. Until then it is empty, and that is the answer to almost every question asked about it.

- 1 **One tab per semester you have finished.** A semester that has not been published has no tab.
- 2 **The GPA is computed,** not entered. It is recalculated from the released marks the moment the semester is published.
- 3 **Awaiting result** is not a nought. It is a subject nobody has marked yet, and it is excluded from the average beside it.

■ WHY A MARK IS NOT HERE YET

- | | | | |
|--|---|---|---|
| <p>○</p> <p>Your teacher enters it</p> <p>The mark is saved as a draft. It can still be corrected.</p> <p>NOT YET YOURS</p> | <p>○</p> <p>Every mark in the semester is in</p> <p>Until the last draft is finished, the semester cannot be published.</p> <p>NOT YET YOURS</p> | <p>●</p> <p>The semester is published</p> <p>One act. The result is computed and every mark in it is released at once.</p> <p>YOU SEE IT</p> | <p>●</p> <p>You are told</p> <p>You and every guardian linked to you are notified the same moment.</p> <p>YOU SEE IT</p> |
|--|---|---|---|

■ QUESTIONS THIS SCREEN ANSWERS

My friend has their result and I do not. You are in different semesters, or a mark in yours is still a draft. Publication is per semester, not per student.

→ A semester cannot be published while any mark is still Draft, p. 33

Can a published mark change? Only by the office reopening the semester, which is recorded. Ask your teacher first: an entry error is corrected before it is escalated.

An empty results screen is not a fault. It means nothing has been published for you yet, and no amount of refreshing will change that.

SECTION 4.5

Fees, and declaring a payment

What you have been billed, what has been received, and what is still owed. This is the one screen in the portal where you submit something.

1 Four figures over the whole account, not over one voucher. They are read out below.

2 One bar per voucher, so a single unpaid instalment is visible against several settled ones.

Rs 315,000 TOTAL BILLED Every voucher issued to you, cancelled ones excluded.	Rs 101,881 TOTAL PAID Money an officer has verified. Nothing else counts here.	Rs 213,119 AMOUNT DUE Billed less paid. A pending declaration does not reduce it.	5 VOUCHERS ISSUED One per instalment, each with its own due date.
--	---	--	--

■ TO DECLARE A PAYMENT YOU HAVE MADE

- 1 Pay through the bank as usual. This screen records a payment; it does not take one.
- 2 Press **Submit payment** on the voucher you paid against, and enter the amount, the date and the reference.
- 3 Watch for **awaiting verification**. The balance will not move until an accounts officer checks it against the bank.
- 4 The receipt number appears when they verify. That number, not your declaration, is the proof of payment.

■ QUESTIONS THIS SCREEN ANSWERS

I declared a payment and I still owe the same.	Correct, and deliberate. Pending money is shown separately so nobody is told they owe less than they do.
The form will not take my amount.	A declaration cannot exceed what is still owed, counting anything already awaiting verification. Check whether you have submitted it twice.

Declaring a payment moves no money. It tells the office to look for one. Until an officer verifies it, your balance is unchanged and no receipt number exists.

SECTION 4.6

Documents, the feed and your profile

Three short screens. Two of them you can change; the third only tells you what has happened.

Documents.
Your own files, in five categories. A file is **pending** until somebody in the office marks it verified.

■ TO ADD A DOCUMENT

- 1 Press **Upload** and choose the category. The category decides where the office will look for it.
- 2 Choose the file. A PDF or an image, up to eight megabytes. A photograph of a document is acceptable if it is readable.
- 3 Leave it. Verification is somebody else's act, and nothing you do on this screen speeds it up.

■ THE FEED

reached from the bell, not from the menu

- 1 **Three filters and a count.** The feed holds notices about you and nothing else, so it stays short.
- 2 **A row names the event and links to it.** A result notice opens Results; an attendance warning opens Attendance. Old links still work.

→ Old notification links still work, p. 29

■ QUESTIONS THESE SCREENS ANSWER

My upload was refused and the file is well under the limit.

The contents are checked, not the file name. A document renamed to end in **.pdf** is still refused, and the message says what was actually found.

Why can I not correct my semester?

It follows your enrolments, which the office maintains. Editing it here would put your record and your registrations out of step.

A file has to be what it says it is. The first bytes are compared against real file signatures and the detected type is what gets stored, because these files are served back from the system's own address.

SECTION 5.1

Choosing a child

One control in this portal changes what every other screen shows. Learn it first, because every figure you read afterwards belongs to whichever child is selected.

My Children
2 wards enrolled · Attendance, grades and fees at a glance

- +2 more

[View full dashboard](#)

1 The card with the coloured edge is the one being viewed. The chip says **Viewing**. Every other screen in the portal is about that child.

2 Four figures per child, so you can compare two children without opening either dashboard.

3 Recent grades are published marks only. A subject still being marked does not appear here at all.

■ TO SWITCH TO ANOTHER CHILD

- 1 Open **My Children**, or use the picker in the sidebar, which offers the same list.
- 2 Press **View full dashboard** on the child you want. The **Viewing** chip moves to their card.
- 3 Check the chip before you read a figure elsewhere. Attendance, results and fees all follow the selection.

■ QUESTIONS THIS SCREEN ANSWERS

A child of mine is not on this list.

The link is made by the office, from the guardian email on the admission form. Ask them to link the record; nothing you can do here will add one.

→ **A guardian link can be moved, and unlinking does not delete the parent, p. 23**

Both my children were admitted separately. Do I have two accounts?

No. A guardian is matched by email address at admission, so a second child is linked to the account you already have.

→ **A parent is matched by email, never blindly re-created, p. 14**

You can only ever see a child linked to you. The selection changes which of your children you are looking at. It cannot reach a child who is not yours, and there is no search in this portal that would find one.

SECTION 5.2

Following progress

The dashboard is the child's position in four figures. The results screen is the same position, assessment by assessment.

- 1
- The strip names the child whose figures follow. It is the only thing on the page that says which. **page 42.**
- 2
- Four figures, all computed, each with the line that says whether it is a problem.
- 3
- The fee panel is a summary. The vouchers themselves are on Fee Details.

93 % ATTENDANCE Sessions attended over sessions held. The exam line is 75 per cent.	0.86 CGPA Published semesters only, weighted by credit hours.	57 % EXAM AVERAGE Across released marks. Unmarked work is left out, not scored nought.	Paid FEE STATUS Arithmetic, not a label. It follows the money actually received.
---	---	--	--

ASSESSMENT BY ASSESSMENT

on the results screen

- 4
- One row per course, one column per kind of assessment. A cell holds a mark, or the reason there is not one yet.
- 5
- The count at the foot says how much of the semester has been marked and released.

QUESTIONS THESE SCREENS ANSWER

The exam average is low but the child says the marks were good.

Read the assessment table on **Results**. It lists every assessment as graded, pending or scheduled, so a low average with two subjects pending is not a low average.

→ An unmarked assessment is reported as awaiting a result, not as absent, p. 33

A teacher told us a mark last week and it is not here.

A mark is invisible to the family until the whole semester is published. What the teacher has is a draft.

→ A mark is invisible to the family until the semester is published, p. 33

Nothing on either screen can be changed from here. Every figure is computed from the register, the gradebook and the fee ledger. To correct one, the record behind it has to be corrected.

SECTION 5.3

Attendance and fees

The two screens a guardian opens most. Both are about the selected child, and both are read from records somebody else keeps.

VCH-2024-000002	6 Mar 2024	Rs. 97,500	Rs. 97,500 Incl. Rs. 15,000 carried forward	Rs. 0	Paid

Fee Details.

One row per voucher, each with its own due date and its own balance. The status on a row is arithmetic, not something anyone set.

Attendance.
The overall figure says in words whether it meets the 75 per cent line. Below it, the same figure month by month and course by course.

93.3 % ATTENDANCE Attended over held. The line under it says whether it meets 75.	28 ATTENDED Of 30 classes held. Late arrivals are counted here.	2 ABSENT Unexcused. Each one was reported to you the day it was marked.	6 LATE ARRIVALS Counted as attended, so they do not lower the figure.
--	--	--	--

■ TO SETTLE AN INSTALMENT

1 Find the voucher with an outstanding balance. Its due date is on the same row.

2 Pay through the bank, then press **Submit a payment** and record the amount, the date and the reference.

3 Expect the balance to stay where it is. The declaration is listed as awaiting verification and is deliberately kept out of the total.

4 Look for the receipt number a day or so later. That is the proof the money was received, and only an officer can issue it.

■ QUESTIONS THESE SCREENS ANSWER

The attendance here differs from what my child was told in class.	A register is written per period, so a figure quoted after one lecture is not the term figure. This screen counts every session held.
We paid, and it still says outstanding.	Money is counted when an officer verifies it against the bank, not when it is declared. Until then it is shown separately and the balance does not move.
We overpaid an instalment.	The surplus is carried to the next voucher, oldest due date first. It is not refunded automatically. → Overpayment is carried forward oldest-due-date first, p. 19

Both screens follow the child you have selected. Switching child changes every figure on them, and nothing on the screens themselves warns you that it has.

5.3 Attendance and fees

44

SECTION 5.4

The feed and your profile

The feed is the only screen in this portal that is about you rather than about a child. So is your profile, and neither of them follows the selection.

Notifications.
Every notice about every child you are linked to, in one feed. The panel at the right flags a child who needs attention.

Profile.
Your own record, and the office's record of which children are yours. Contact details are editable; **Linked students** is not.

READING A NOTICE

- 1 Read the name. A notice about a child names the child, so a feed covering two children is never ambiguous.
- 2 Follow the link on the row. It opens the screen the notice was written about, for the right child, with the selection changed for you.
- 3 Use **Mark all as read** when you have finished. The rows stay; only the unread count changes.

QUESTIONS THESE SCREENS ANSWER

Does changing my password affect my child's?	No. The password is yours, whichever child happens to be selected at the time. Your child has their own account and their own.
I have two children in the same class. Will I be told twice?	No. Recipients are deduplicated, so an announcement to that class reaches you once.
A child is marked at risk in the wards panel.	Their attendance has fallen below 75 per cent in at least one subject. Open their dashboard from the panel; the subject is named on Attendance.
An old link from an email still opens.	Deliberately. Addresses this portal no longer uses are translated to the screen that now shows the same thing. → Old notification links still work, p. 29

A notice about your child is written about them, not to them. Your child reads that their result has been published; you read that Ayeza's result has been published. The same link opens the right screen for the portal each of you is in.
